Embrace New Skills and Boost your Employability

16 November 2006, Singapore – With the growing emphasis on having skill-based workers in the workforce, Informatics, a provider of quality lifelong learning services has updated its diploma programmes to integrate skill-based elements into the curricula. Apart from ensuring continual delivery of quality programmes, the change will also ensure that students receive the knowledge and skills that are relevant to today's market needs. This will in turn enhance students' employability and strengthen their competitiveness in the workforce. The first batch of programmes with the new structure will be rolled out in January 2007.

As well as theory, students will be exposed to hands-on learning. They will be given the opportunity to learn based on real working scenarios and the use of up-to-date technology and application software. Upon completion of the course, students will have acquired critical skills that will help them gain a competitive edge thus boosting their employment opportunity.

"In response to employers' comments we are introducing a strong skills-base element into our diploma and advanced diploma programmes to complement the academic site. With the fast changing pace of technology today, the shelf life of "knowledge" has become shorter and shorter. It is in acquiring practical skills that students best equip themselves for their future working life. In addition, this means that an employer gets an employee who can immediately add value to the organisation. So everyone benefits!" Dr. Jonathan Britt, Director - Informatics Academy.

Among the first few programmes ready to run in January 2007 are the International Diplomas and International Advanced Diplomas in Computing, Business Administration and Mobile Applications Technology. All other programmes under this exercise are expected to be up and running by end of 2007.
